

1. Vertical section at X = 23.6 (lens axis): front cup, glue plate with the module on its front face, dovetail boss, back plate, puck

case frame; Z (front -> puck) right, Y up. blue hatch = front cup · cross-hatch = back plate · dark hatch = holder · green = XIAO stack
purple = header body/pins · RED = camera module GLUED to the holder plate · orange = USB plug · grey = puck tube

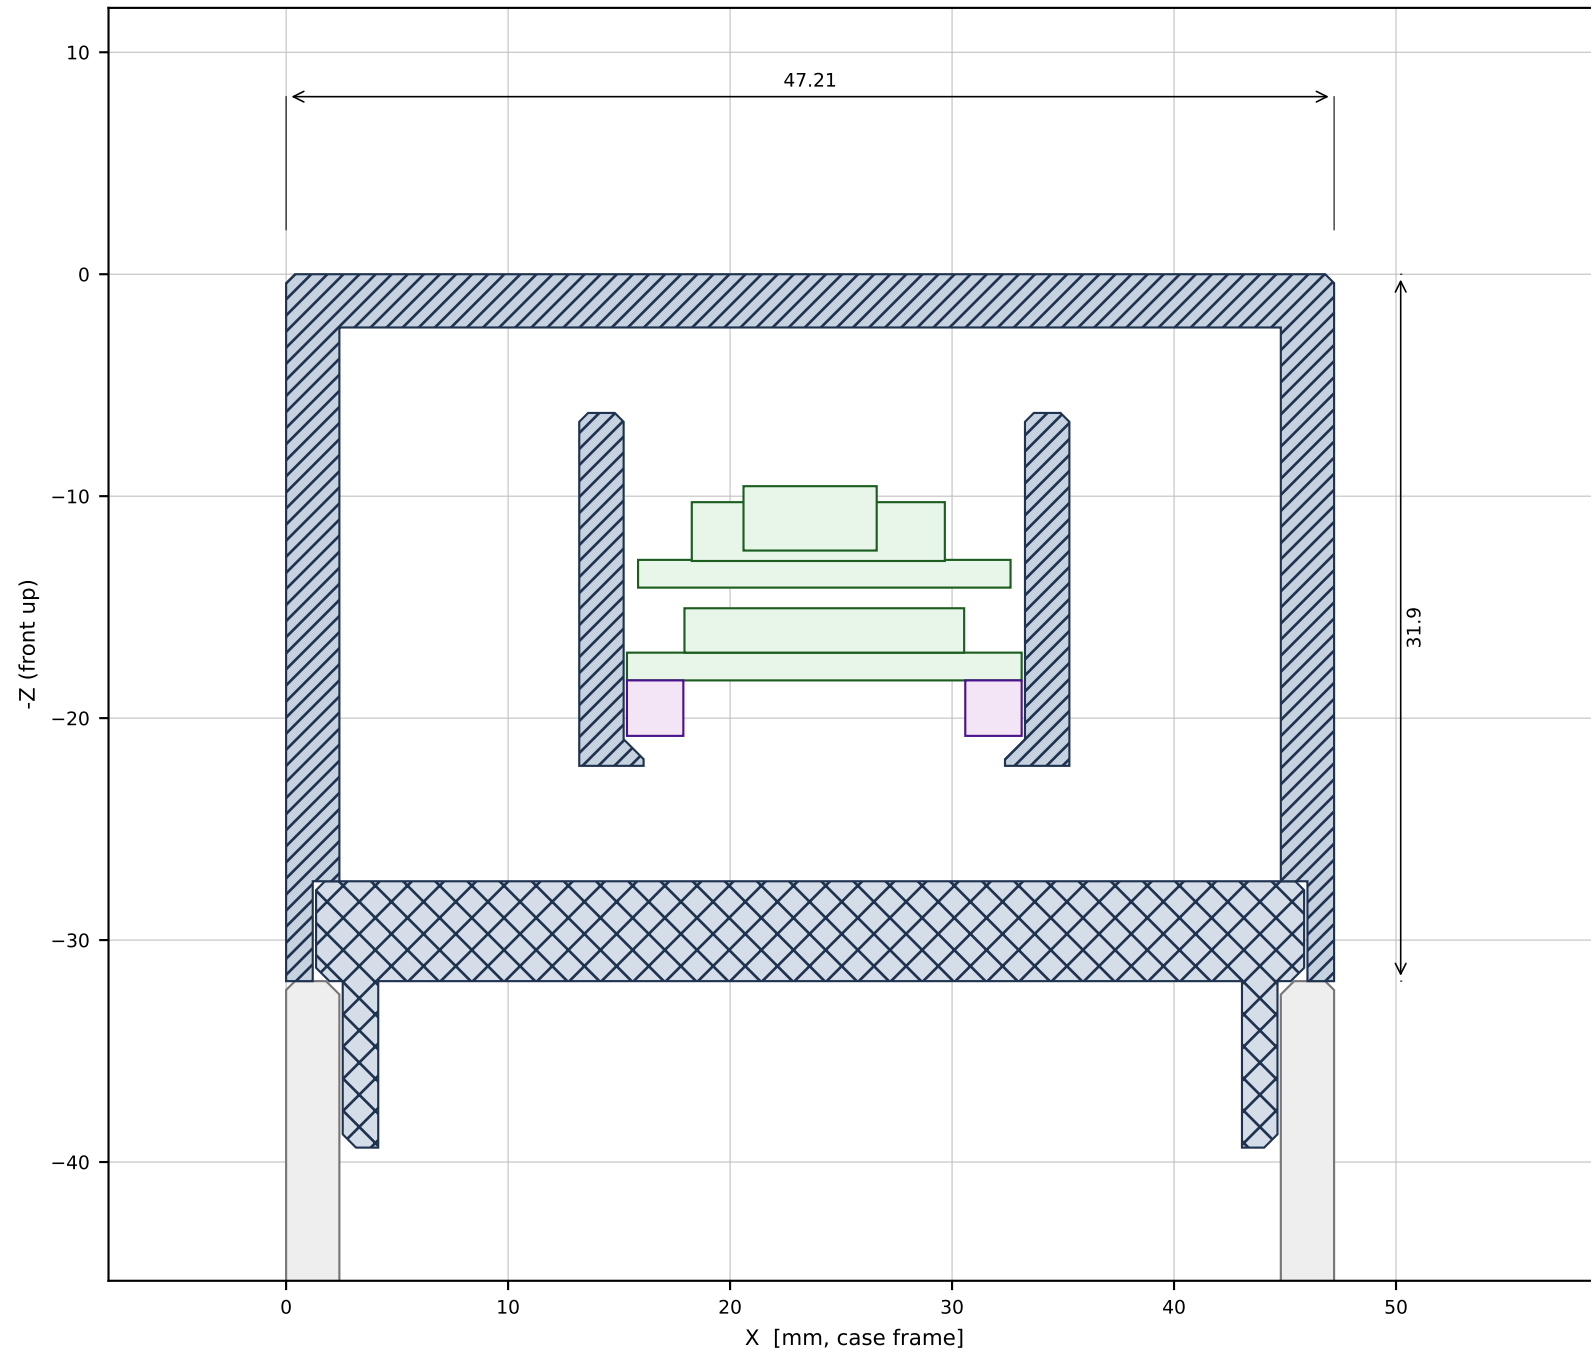

2. Across at the lens axis: the GLUE PLATE, the module glued to its front face, lens in the hole

case frame, section at Y = 56.73; X right, front (Z 0) UP, puck below. blue hatch = front cup · cross-hatch = back plate · dark hatch = holder · green = XIAO stack
purple = header body/pins · RED = camera module GLUED to the holder plate · orange = USB plug · grey = puck tube

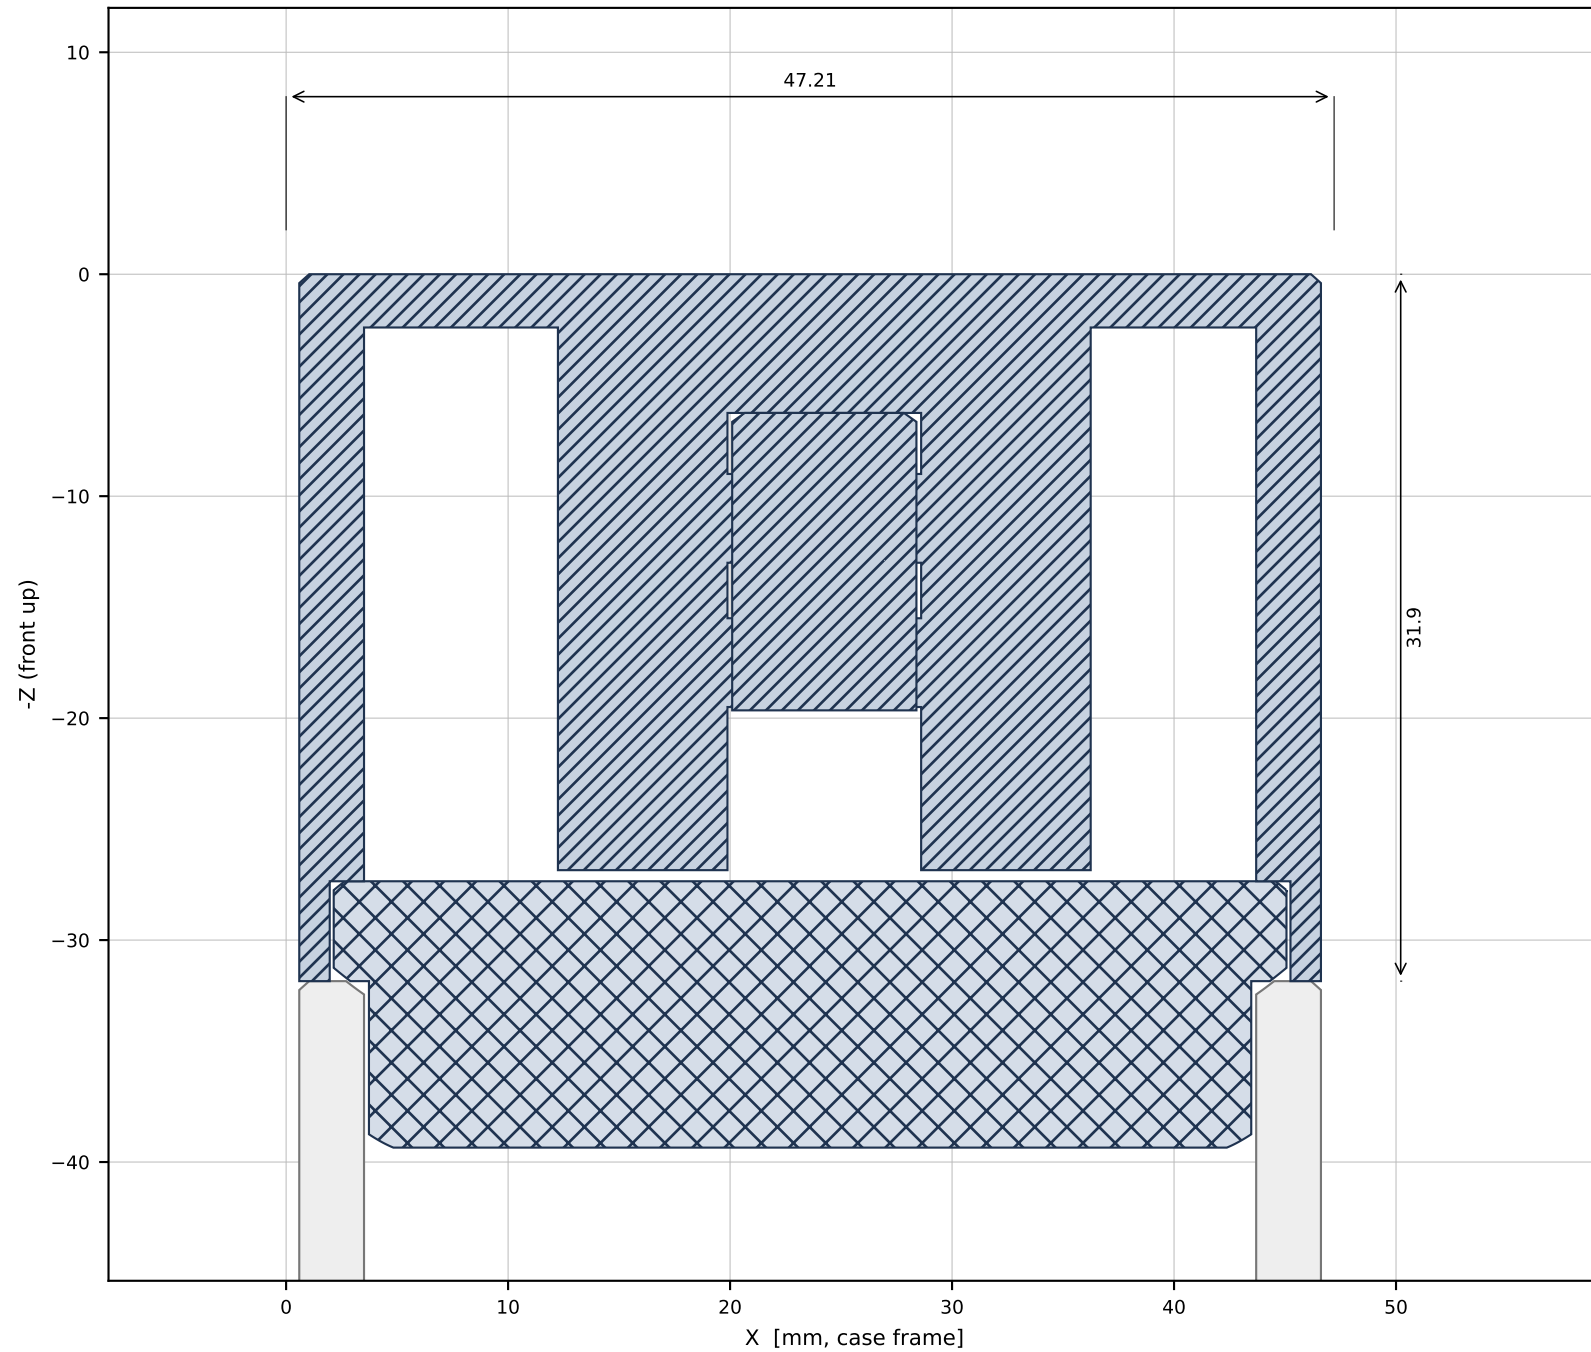

3. Across at mid-board (Y = 64.8): legs, lips, headers, back plate in the rebate

case frame, section at Y = 65.20; X right, front (Z 0) UP, puck below. blue hatch = front cup · cross-hatch = back plate · dark hatch = holder · green = XIAO stack
purple = header body/pins · RED = camera module GLUED to the holder plate · orange = USB plug · grey = puck tube

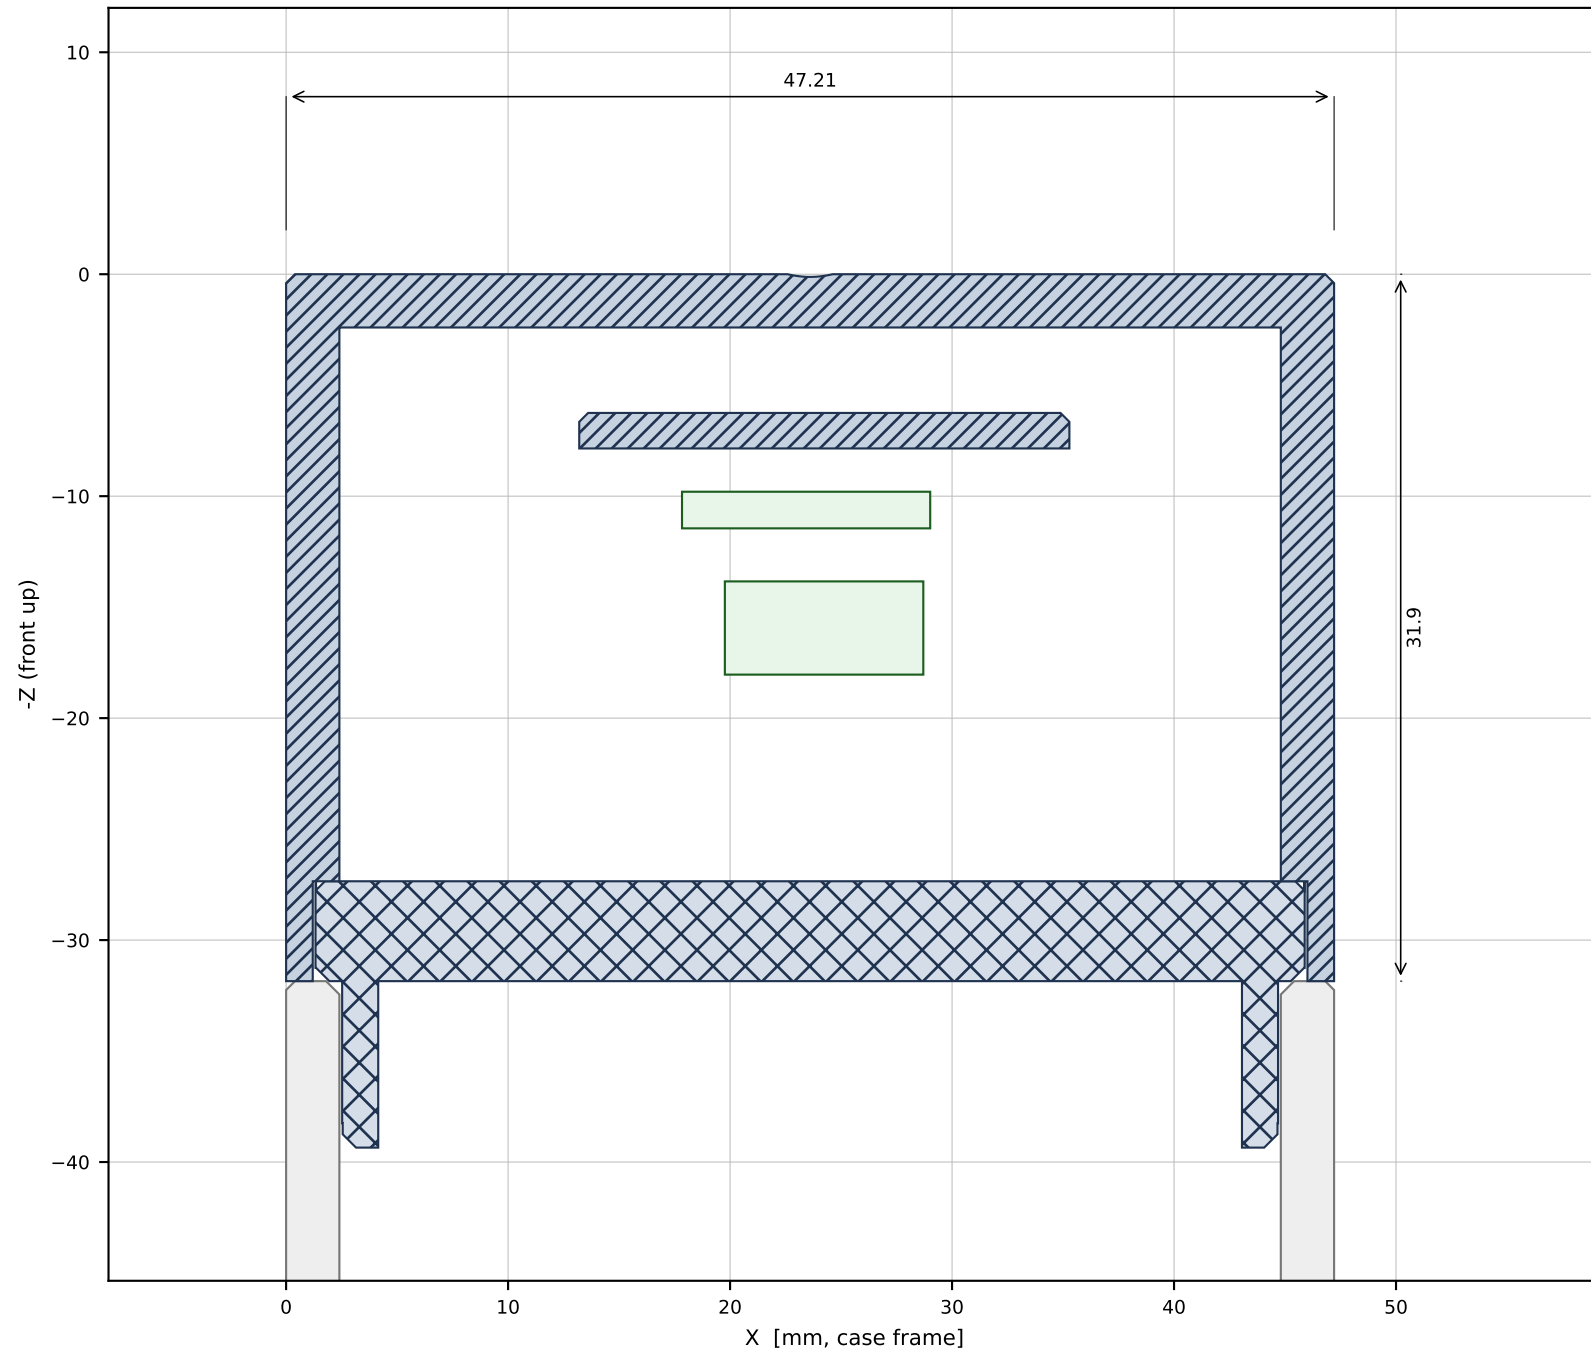

4. Across through the dovetail (Y = 77.4): rail in the slot, crush ribs on the flanks

case frame, section at Y = 77.40; X right, front (Z 0) UP, puck below. blue hatch = front cup · cross-hatch = back plate · dark hatch = holder · green = XIAO stack
purple = header body/pins · RED = camera module GLUED to the holder plate · orange = USB plug · grey = puck tube

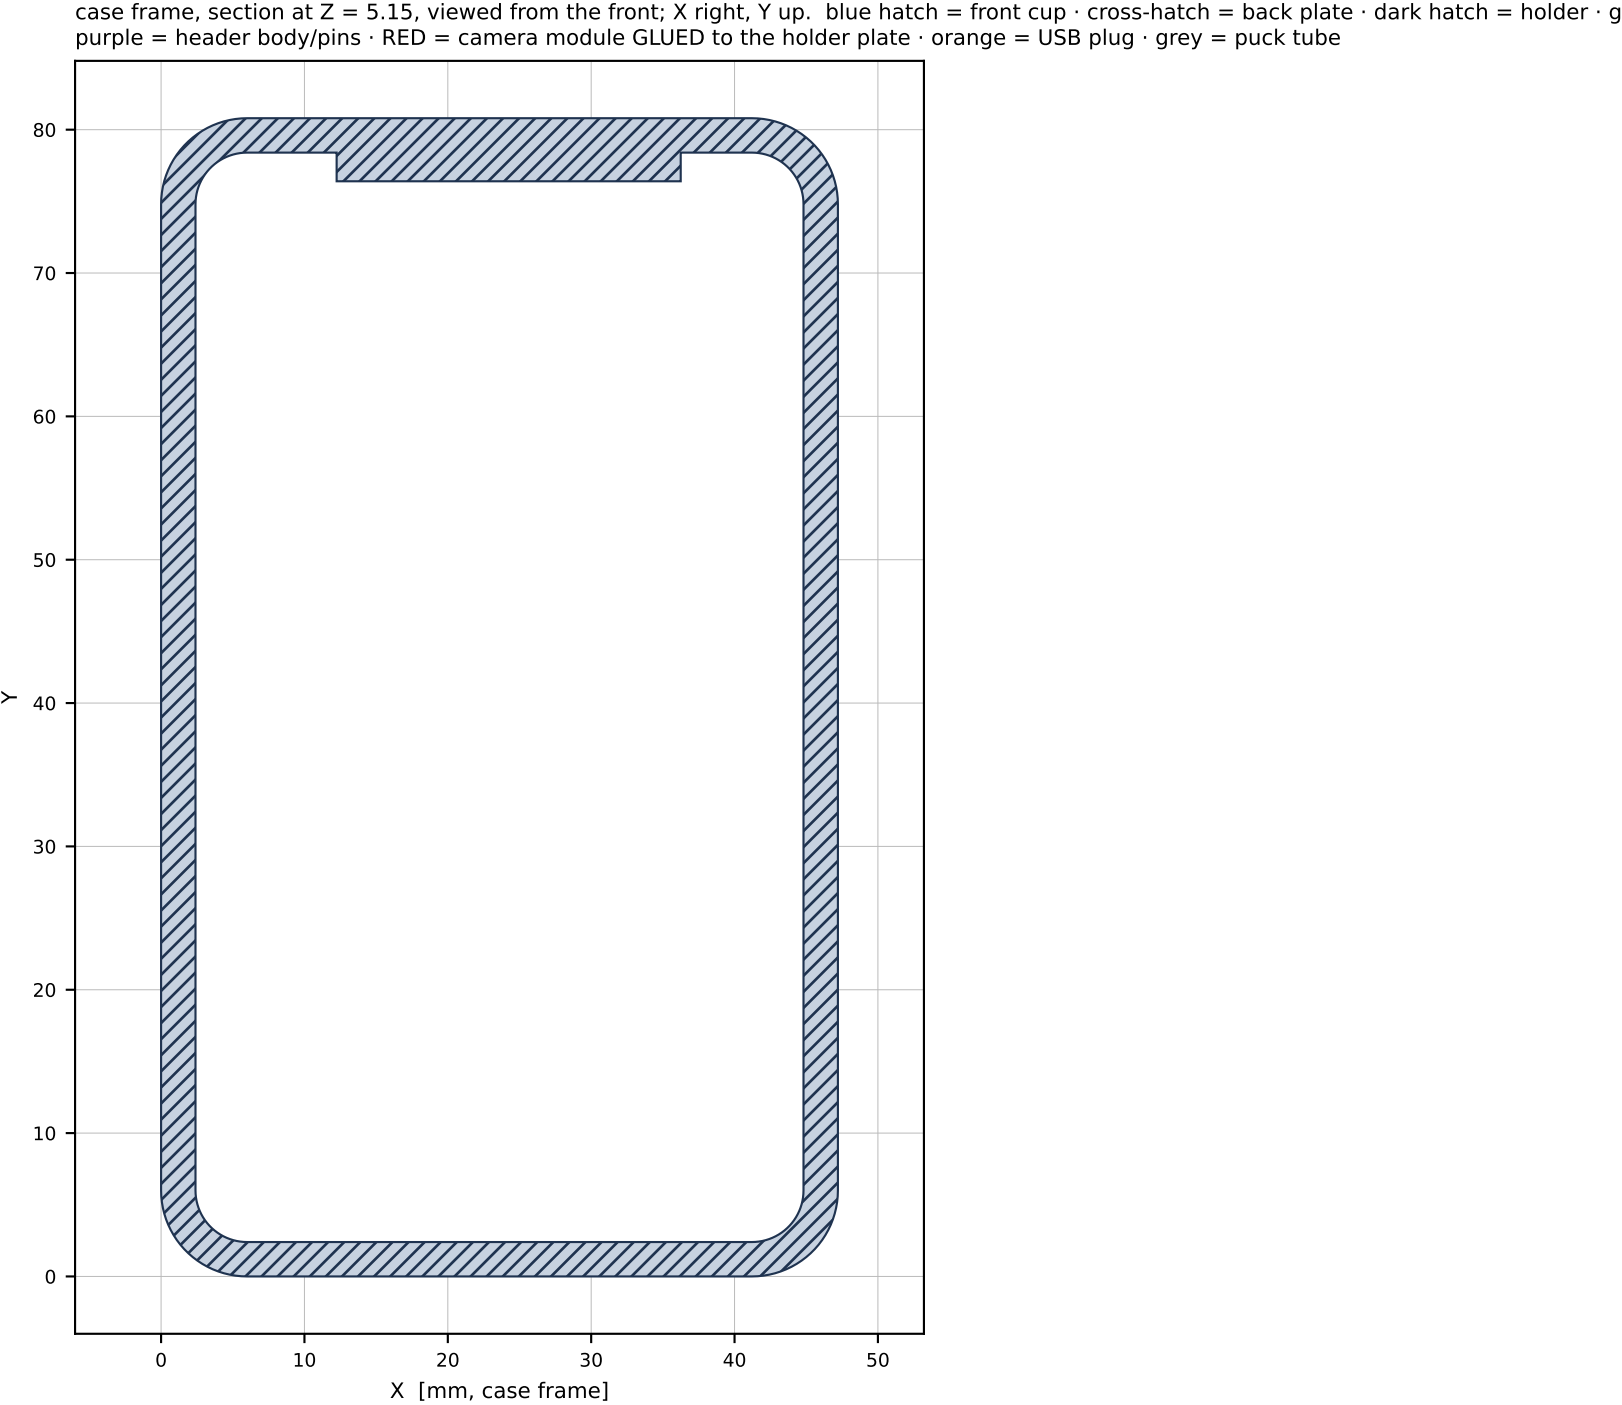

5. Across just past the PCB end: clear inner face (posts removed), USB plug envelope

case frame, section at Y = 52.50; X right, front (Z 0) UP, puck below. blue hatch = front cup · cross-hatch = back plate · dark hatch = holder · green = XIAO stack
purple = header body/pins · RED = camera module GLUED to the holder plate · orange = USB plug · grey = puck tube

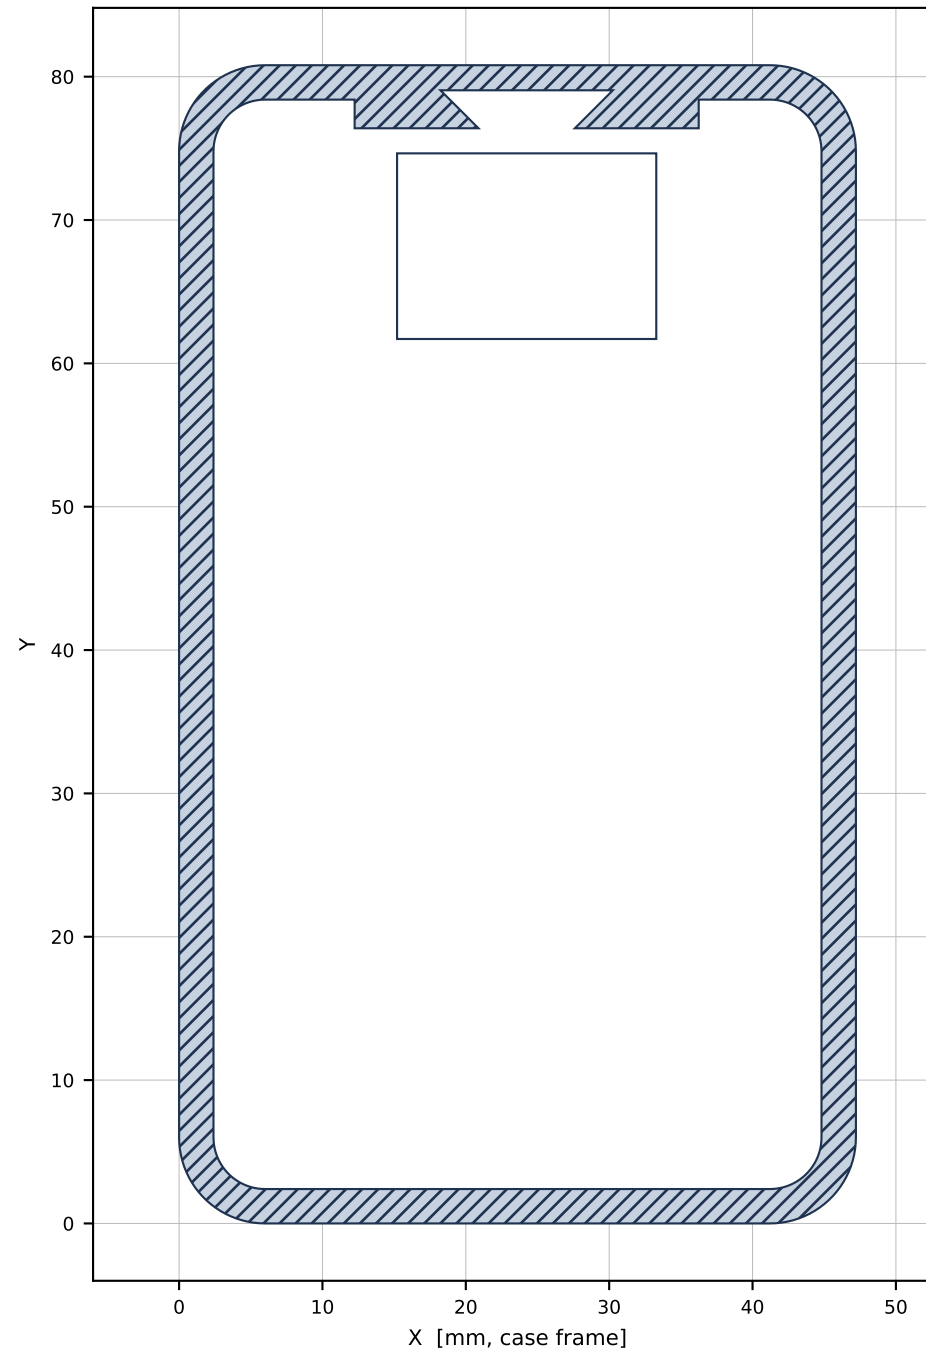

6. Plan through the glued camera head: 8.3 module standing clear inside the cup, slot boss

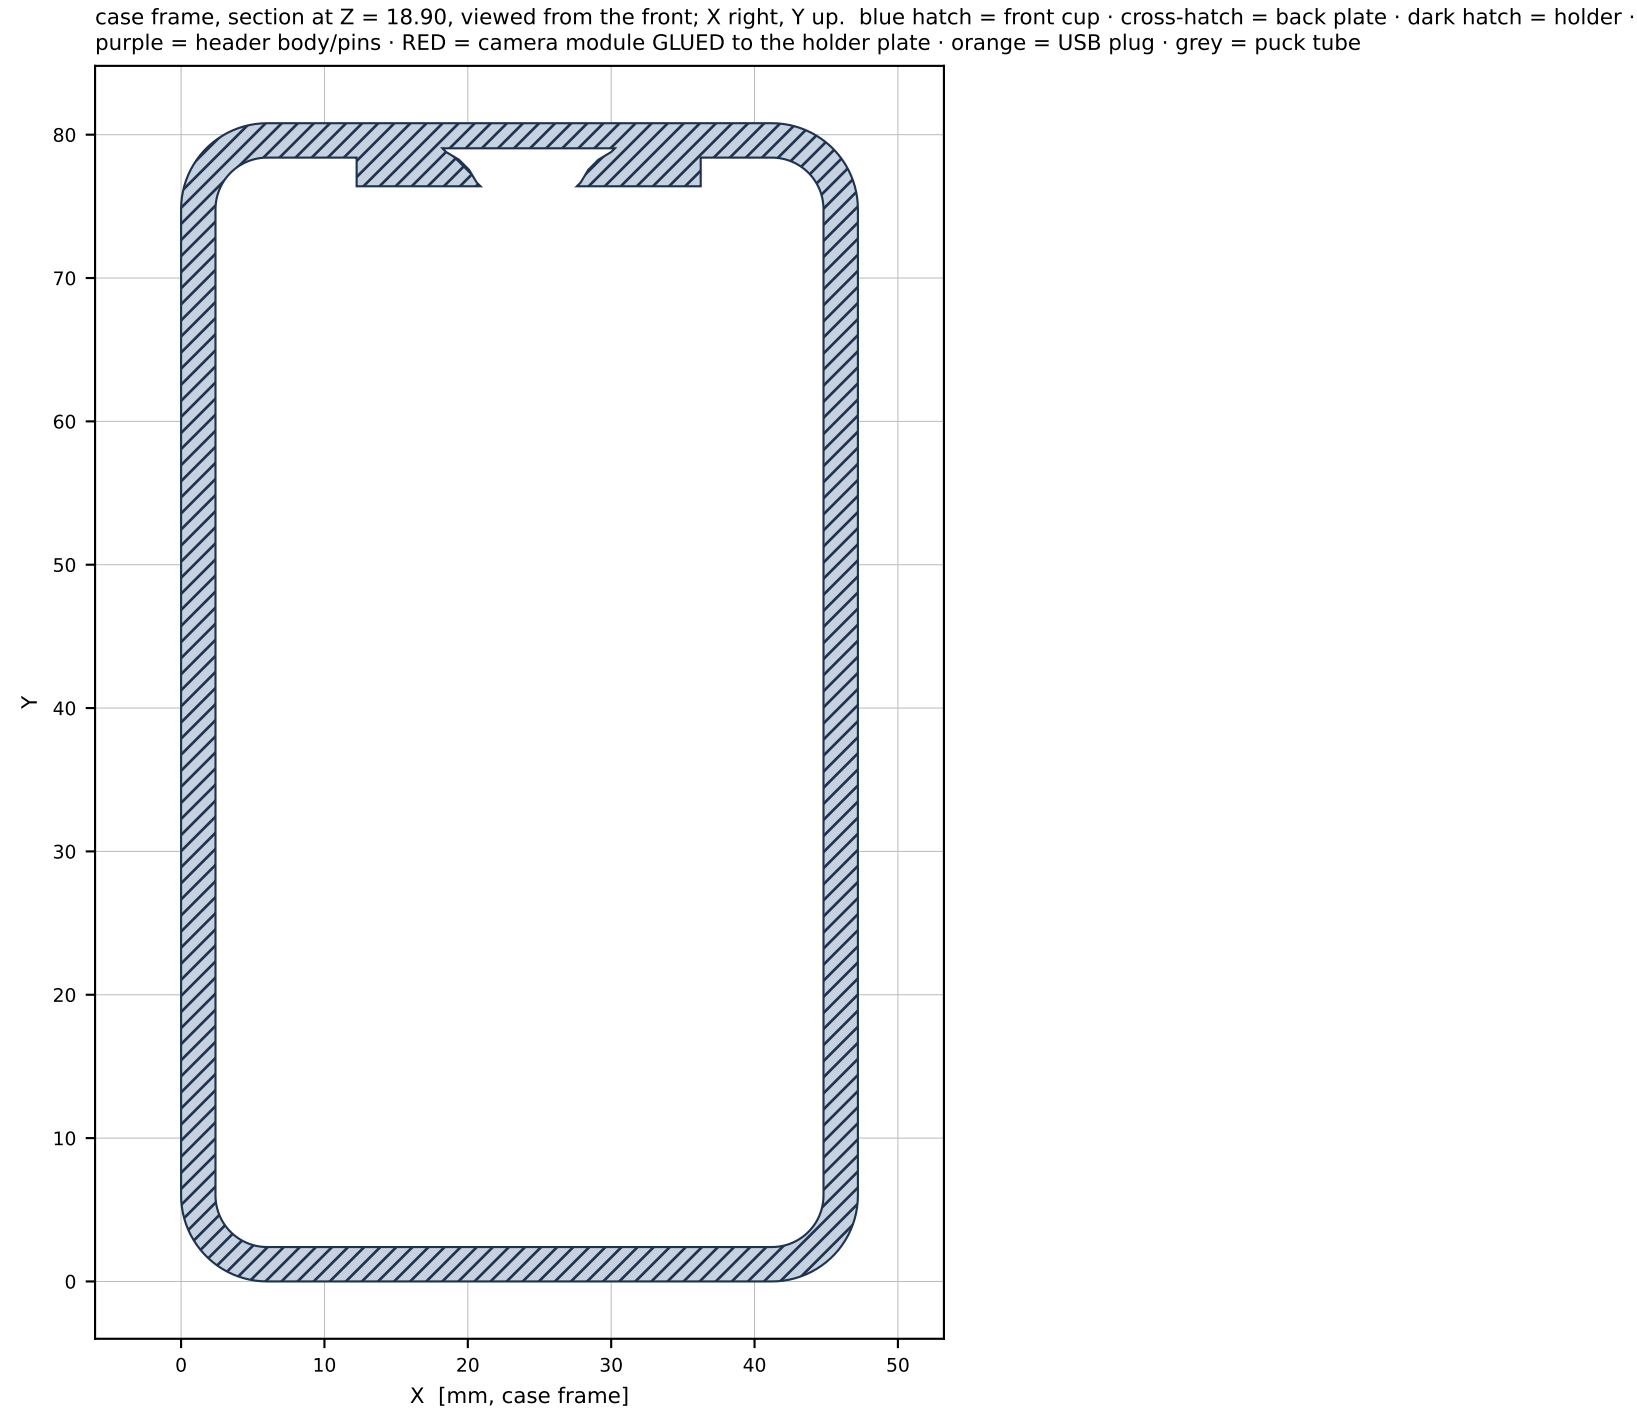

7. Plan through the glue plate: solid plate at the camera end, open middle for the flex, rail in the slot

case frame, section at Z = 7.05, viewed from the front; X right, Y up. blue hatch = front cup · cross-hatch = back plate · dark hatch = holder · g
purple = header body/pins · RED = camera module GLUED to the holder plate · orange = USB plug · grey = puck tube

8. Plan through the PCB: legs and grip ribs, rail in the slot, empty cup body

9. Plan through the rebate: back plate, edge crush ribs, cord slot below

case frame, section at Z = 28.85, viewed from the front; X right, Y up. blue hatch = front cup · cross-hatch = back plate · dark hatch = holder · purple = header body/pins · RED = camera module GLUED to the holder plate · orange = USB plug · grey = puck tube
